

Cerebral Palsy

Reasonable Adjustments

Cerebral palsy is not an illness. It is a physical impairment, usually caused by failure of part of the brain to develop before birth or in early childhood.

The main effect is difficulty in movement, which can affect hands, arms, legs or feet, and sometimes face and tongue muscles, causing grimacing and drooling. Muscles may be stiff, weak or shaky.

There are different types of cerebral palsy and the level of disability can vary enormously.

Sometimes other parts of the brain are also affected, causing difficulties with sight, hearing, touch and concentration.

Work Place Reasonable Adjustments: what you and your colleagues can Do And at your workplace

Suitable reasonable adjustments will vary but could include some of those suitable to people with:

Ms - Multiple sclerosis

Visual impairment

Hearing impairment
